

High quality products for the betterment of the Horological Industry through chemistry.

Environmentally friendly and safe to use.

Radiant 777 Watch & Clock Cleaner

Radiant Cleaner is "The Ultimate Watch and Clock Cleaner" because it makes parts clean and shiny at the same time. Radiant is rated as a high performance cleaner and is in a class of its own. After the cleaning cycle, metal parts sparkle. The concept of cleaning and having parts shine simultaneously took Zenith's chemists seven years to develop. Thanks to their knowledge of cleaning technology and experimentations, they arrived at the formula for Radiant.

The Horological Industry always wanted a superior performing cleaner that would restore parts to their original luster, especially antique movements that have not been serviced for a long time. This revolutionary new concept that combines cleaning and making movements shine exceeded everyone's expectations. It is gentle enough not to attack the lettering on baked-on enamel coatings and yet strong enough to remove and dissolve hardened grease and oil from metal parts. Another outstanding feature about Radiant is its Low Odor. There is no longer any need for watchmakers to be exposed to harmful ammonia fumes and obnoxious odors.

Formula 67 Watch & Clock Cleaner

There are chemicals that act like ammonia - without giving off ammonia fumes. The ammonia group is attached to a chemical, when reacted stays in solution where it is needed to clean metal parts. Zenith chemists use that chemical to make Formula 67. Formula 67 is considered to be "ammoniated" with the same outstanding properties as ammonia cleaners, without the harmful fumes. Our chemists also replaced the highly flammable solvent with safe and low odor solvents.

During the cleaning cycle with Formula 67, hardened grease and oil are dissolved and particles that have adhered onto metal parts are dislodged by micro-molecular action. All this cleaning power is being accomplished with a safe and environmentally friendly cleaner. After the cleaning cycle movements are ready for the Rinsing Cycle.

Drizebrite "Final Rinse"

The rule is: Rinsing Solutions should have the same solvents as the cleaner in order for it to be most effective. Zenith's Drizebrite rinse has the same solvents as Formula 67 cleaner. Be reassured that the rinsing action is thorough and complete because of the similarity of solvents in both products. What makes Drizebrite rinse unique is its Odorless rating and the fact that it leaves parts spotless without any oily film. When ordering Formula 67 always include Drizebrite as the rinsing solution.

Jewellery Cleaner Concentrate, Product 249NA

Zenith's non-ammoniated Jewelry Cleaner Concentrate is an excellent cleaner for jewelry that contains semi-precious stones. Rated environmentally friendly and safe to use because it does not emit any harmful fumes. Product 249NA can be used in ultrasonic, mechanical and manual cleaning. One gallon makes 8 gallons of Odorless cleaner.

Silver Cleaner - Dip - It, Product 292

Dip-It instantly removes tarnish from silver, silverware and cutlery. Ideal for coin cleaning. Just dip and rinse with water, then wipe dry. You will be amazed at the results.

Water Based Watch & Clock Cleaning Concentrate, Product 251NA

Most clockmakers use Water Base cleaners because of the size of movements used in clocks. To clean clock time pieces requires a large amount of cleaner. Water Base Cleaners come in concentrated form which is diluted to a 1:7 ratio with water. One gallon of concentrated solution makes eight gallons of cleaner. Zenith's Product 251NA is a water base cleaner that is rated Low Odor and when diluted is Odorless. Tests show that it out performs cleaners that are ammoniated. There is no need for clockmakers to inhale dangerous fumes when there is a better and safer cleaner.

The "Ultimate" Hair Spring Cleaner 505

The Ultimate Hair Spring Cleaner is environmentally friendly and safe to use. It does not contain any chlorinated or brominated solvents. Product 505 is an excellent degreaser and evaporates fast, leaving delicate hair springs perfectly clean and dry. Be reassured any oil entrapped between tightly coiled hair spring wire will be dissolved and removed.
